Projects

Weather Dashboard:

<https://petermodavis.github.io/weather-dashboard/>

Used two calls to two different API's to dynamically present the user with the current weather and the 5 day forecast of the desired city. Utilized Event Delegation to manage the local storage.

Coding Quiz Challenge:

<https://petermodavis.github.io/coding-quiz-challenge/>

Created a quiz that presents questions to a user. If the user answers incorrectly then time is taken off the timer that is counting down. Final score can be saved in the users local storage.
